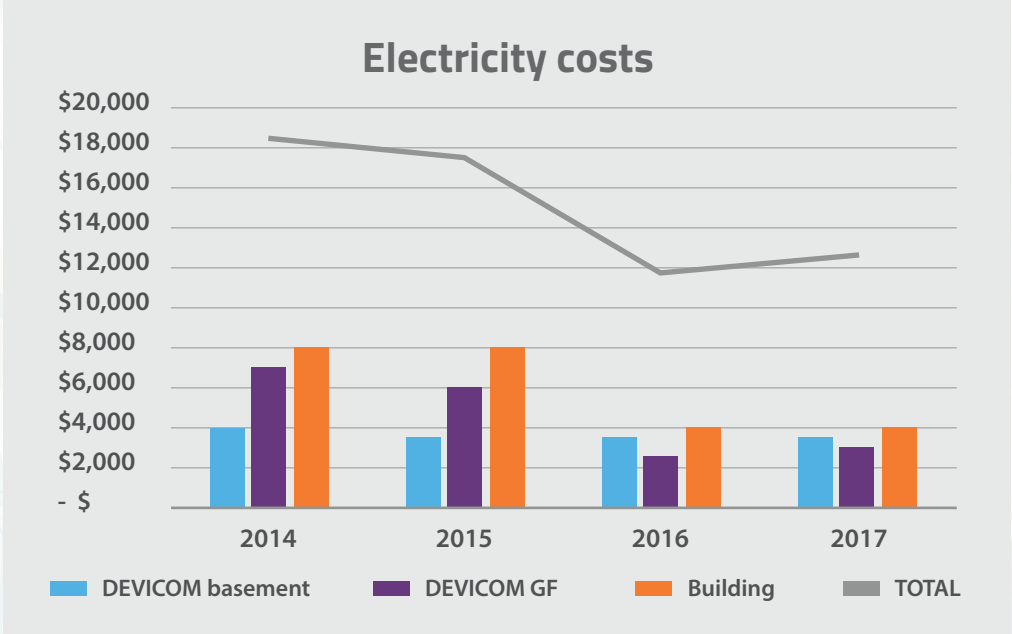
SMART BUILDING MANAGEMENT

Building automation for our comfort

A major economic impact

In 2015, an investment of around $30k was made to integrate building automation into our facilities. In fact, the technical building management that was implemented made it possible to **intelligently and optimally manage** the lighting, heating and air conditioning, access control and video surveillance. The installation of such a system guaranteed **savings of 30% per year**.



In this table, the reference year is 2014. The implementation of the management system was carried out in the last quarter of 2015 and its benefits had considerable impact from 2016. **A reduction of almost 45% in electricity costs saving about $17k in 2 years**.

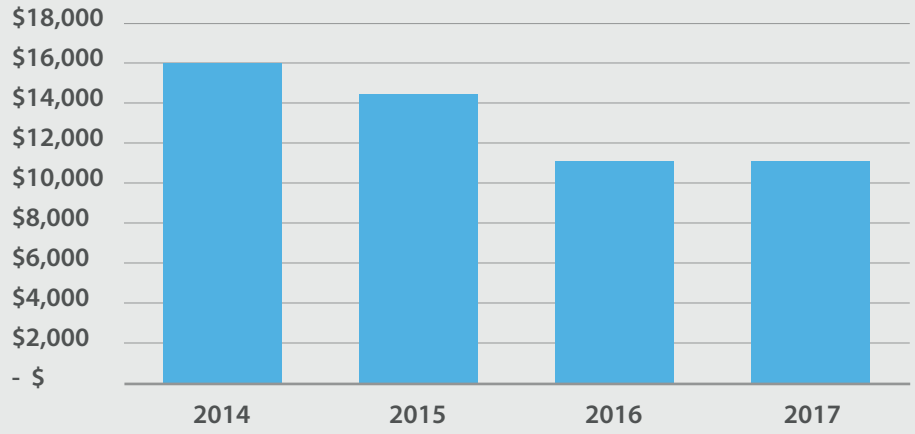
BUILDING HEATING

Saving on fossil fuel consumption

A "Snowball" effect

This smart building management project has had a **positive impact** on the consumption of fossil energy used to heat the building.

The smart building management project has therefore **resulted in equivalent savings**, for a ROI in just 2 years ($17k + $12k).



Still compared to the 2014 reference year, **this represents a 33% reduction in costs, representing savings of nearly $ 12k a year.**
